the formation of the uzbek nation state is a detailed and insightful examination of the process of nation state formation in the central asian region in the post october revolution period based on a case study of uzbekistan author anita sengupta examines the role of language and religion in the formation of the uzbek nation state and demonstrates the continuous transition involved in such a process

progress in precambrian geology has been exceptionally great indeed quite striking for geologists of the older generation only some 30 40 years ago the precambrian appeared as an uncertain and even mystic prelude to geologic evolution even the very name

precambrian means some indistinguishable unit in the early history of the earth the beginning of which is poorly known at the same time it was obvious that the precambrian formations are of extremely varied and complex composition and poor knowledge and lack of reliable methods of division and correlation were to blame for the lack of significant progress in studies of this early evolutionary stage of the planet certainly even at the very start of precambrian studies the results obtained were quite promising lifting as they did the mysterious veil over the regional precambrian but they presented no general realistic picture of this early stage in the earth's evolution at that time recently this situation has completely changed due to new methods of study of the older formations and due also to the refinement of some well known methods in particular of division dating and correlation of siliceous metamorphic strata application of different isotope methods of dating was most important in providing objective rock age and thereby the age of geologic events recorded in these rocks thus it became possible to reconstruct the oldest geologic period of our planet

geological evolution of middle to late paleozoic rocks in the avalon terrane of northern mainland nova scotia canadian appalachians a record of tectonothermal activity along the northern margin of the rheic ocean in the appalachian caledonide orogen

inspired by a gsa penrose conference held in 2005 cosponsored by the international association of sedimentologists and the british sedimentological research group the 17 papers in this volume explore sedimentary environments in arc collision zones and their utility in recording the evolution of modern and ancient convergent margins the first set of papers in the collection focuses on formation and evolution of the sedimentary record in arc settings and arc collision zones concentrating on modern intra oceanic examples papers include studies of flexural modeling and factors that affect development of siliciclastic and carbonate deposits around modern arcs the second half of the volume presents new applications of arc sedimentary records these relate primarily to constraining tectonic events in the evolution of arc systems but also concern the links among tectonic uplift collision and geomorphic and climatic feedback mechanisms in arc collision zones publisher's website

this comprehensive book describes cork as a natural product as an industrial raw materials and as a wine bottle closure from its formation in the outer bark of the cork oak tree to the properties that are of relevance to its use cork is presented and explained including its physical and mechanical properties the industrial processing of cork from post harvest procedures to the production of cork agglomerates and composites is described intended as a reference book this is the ideal compilation of scientific knowledge on state of the art cork production and use presents comprehensive coverage from cork formation to post harvest procedures explains the physical properties mechanical properties and quality of cork addresses topics of interest for those in food science agriculture and forestry
